

What is claimed is:

1. A pencil-holding clip comprising:
 - a strip of flexible resilient material,
 - said strip having a base,
 - said strip being turned upwardly at an inner end of said base to provide a first upwardly extending leg,
 - said strip being turned upwardly at an outer end of said base to provide a second upwardly extending leg spaced from said first leg,
 - said strip having a third leg extending upwardly from said base between and spaced from said first and second legs,
 - said first and third legs cooperating with a first portion of said base to provide a first generally U-shaped, upwardly opening channel,
 - said second and third legs cooperating with a second portion of said base to provide a second upwardly opening channel,
 - said strip having a tongue extending from an outer extremity of said second leg downwardly into said second channel in spaced relation to said second and third legs,
 - said second leg and said tongue cooperating to provide a generally V-shaped, upwardly opening, pencil-receiving slot,
 - said first channel being adapted to receive and grip a lower edge portion of a wearer's cap; and
 - said slot being adapted to receive a pencil to be gripped between said third leg and said tongue.

2. The pencil-holding clip of claim 1, wherein said first and third legs have barbs adapted to grip and hold the lower edge portion of the cap.

3. The pencil-holding clip of claim 1, wherein said tongue has steps along its length spaced different distances from said third leg to cooperate with said third leg in holding pencils of different diameters.

4. The pencil-holding clip of claim 3, wherein said tongue slants from the outer extremity of said second leg downwardly toward said third leg.

5. The pencil-holding clip of claim 4, wherein said first and third legs have barbs adapted to grip and hold the lower edge portion of the cap.

6. The pencil-holding clip of claim 5, wherein said strip is made of a plastic material.
